Problem with redirectURL in SaveButton
Was this post helpful?

Hi, I want to solve this:

I made a Custom Form List in a .aspx form in Sharepoint Designer, and I want to change the redirectURL property of the SaveButton (such as /Page/Thanks.aspx), but, everytime I change it, the Sharepoint Designer always change it back to the default url (/Lists/Visitantes/AllItems.aspx). I hate this, because it doesn't let me finish this page. If you have a solution for this, please, let me know ASAP.
Thanks.

Cristhian.

I found a solution in <http://www.graphicalwonder.com/?p=666>
It worked for me.
Good luck !

I think we can change the redirection option by share point designer 2007...
By using ASP.net control hidden box, fill it with your destination URL and after completion of your task open its value URL hope your requirement will be met.

Using the user control also we can easily redirect to another page. write functionality or only redirect page location in the User control and call it as in a web part. it is secure and easily maintainable.

I had this same issue, and posted the way we solved it here:
<http://forums.microsoft.com/MSDN/ShowPost.aspx?PostID=2581837&SiteID=1>

Not sure if this will work for you guys or not, but it works great for me.

Jeremy
